**Wound Management** consists of 10 lessons developed to educate a team of interdisciplinary clinicians about all of the issues relevant to caring for the patient who has a wound, not just for treating the wound. Authored by Rose Hamm, PT, DPT, CWS, FCCWS, this interactive educational online program explains acute and chronic wound healing; describes the pathophysiology of arterial, venous, neuropathic, pressure, and atypical wounds; and discusses current standards for treating wounds including the use of the different types of dressings, debridement, and physical agents.

**Wound Management** is rich in interactivity and multimedia elements including images and video clips of various wounds, tests and interventions which are designed to engage and enhance learning by providing practical application to the care environment, thus promoting an interdisciplinary transfer of learning into practice.

**Features and Benefits:**

- Evidence-based practice to prevent and treat wounds
- Case-based, problem-oriented approach
- Assessment and treatment video clips
- Lesson review
- Offers continuing education credit for nurses and physical therapists

Elevating the standards of prevention, care, and treatment of acute and chronic wounds . . .
Wound Management consists of 84 topics in 10 lessons that address these key areas:

- Wound Healing
- Wound Evaluation
- Arterial Wounds
- Venous Wounds
- Neuropathic Wounds
- Pressure Ulcers
- Atypical Wounds
- Debridement
- Dressings
- Physical Modalities

Wound Management is delivered by MC Strategies’ dynamic learning management system specifically designed for healthcare. Our goal is to provide healthcare e-learning solutions that will impart knowledge, test understanding, and assess performance to meet regulatory, organizational, and professional practice solutions.
