COMPLIANCE COURSE CURRICULUM OFFERS HOSPITAL-WIDE REGULATORY GUIDANCE

Healthcare regulations are becoming more numerous and complex every year. For busy front-line providers, staying on top of all the rules often can seem overwhelming. Yet failing to follow government mandates can have serious consequences, both for individuals and for the organization as a whole.

Elsevier/MC Strategies, a leader in healthcare e-learning, understands the challenges of healthcare compliance. That's why we've developed EduCode Regulatory Essentials, a web-based e-learning solution that provides hospital personnel with the practical guidance they need to meet a full range of healthcare regulatory requirements.

Hospital-wide Compliance

With the EduCode Regulatory Essentials' two e-learning courses -- General Compliance Training and Privacy and Confidentiality -- your clinicians, compliance officers, case managers, revenue cycle managers and their staff will gain a clear understanding of critical federal regulations, including:

- > Medicare and Medicaid Fraud and Abuse Regulations
- > Health Insurance Portability & Accountability Act (HIPAA)
- > Deficit Reduction Act (DRA)

A Wealth of Knowledge

The course, which offers 16.5 continuing education credit hours from AHIMA, provides a comprehensive review of key regulatory requirements and incorporates real-life scenarios designed for any hospital staff required to have an understanding of privacy and patient confidentiality issues.

Other features include:

- Detailed guidance on patient rights, privacy notices, employee responsibilities, information release authorizations and much more.
- Recommended Office of Inspector General compliance programs and instruction on fraud and abuse, teaching physician rules, medical necessity, advanced beneficiary notices and general documentation requirements.

Interactive Tools

Like all of MC Strategies' e-learning courses, EduCode Regulatory Essentials lessons contain a variety of multimedia elements, including text, tables, audio, video, and animation. Self-check learning activities help learners engage with the content, test their knowledge and identify areas requiring further study. And real life case studies provide realistic scenarios that help strengthen decision-making and critical thinking.

Anywhere/Anytime Learning

For busy hospital staff, EduCode Regulatory Essentials provides unmatched flexibility by offering self-paced, anywhere/anytime learning. Staff educators and administrators can track the learner's progress, view testing results, and customize the continuing education program to meet individual staff needs. And transcripts and other related documentation are produced and retained for administrative record-keeping through Elsevier/MC Strategies' Peer Reviewed Learning Management System, an education platform specifically designed for healthcare settings.

The collage displays several overlapping screenshots from the e-learning platform. At the top left, a 'Test' interface shows 'General Instructions for Taking Tests' and a list of questions. Below this, a 'Key Concept—Treatment, Payment, and Healthcare Operations (TPO)' section is visible. A 'Knowledge Check: ABN Delivery' section features a case study about Rosa Gonzalez, an 82-year-old nursing facility resident with a femoral neck fracture, who is diabetic and has deteriorated mobility. The case study includes a 'Test' button and a 'Flashcard' icon. Below the case study, a 'What Are the ABN Delivery Requirements?' section provides information on Medicare requirements for Advance Beneficiary Notice of Noncoverage (ABN). The screenshots also show various navigation toolbars with icons for Annotation, Change Manager, Personal Page, Lesson Info, My Notes, Lesson Map, Lesson Menu, and Take Test.
